Product Description

36 PF00 25 Motorcycle BAJAJ BM150 Silencer Assembly Muffler

Production:

The internal structure of the motorcycle exhaust pipe is a silencer.

The composition of tail elimination can be roughly divided into two categories, the first is to use the staggered partition to cause the reflection wave to reduce the volume, the original crystal is almost in this form: the second is the common linear sound-absorbing cotton type of modified crystal, from the standpoint of fluid mechanics, the exhaust resistance of the partition type must be larger, and the horsepower increase is not as advantageous as the linear type.
