Product Description

48V-60V 10Inches 1500W Brake Disc Electric Motor for Moped Motorcycle Scooter

Products Description

Product name	Brake Disc Electric Motor
Model	10Inches
Materials	Copper
Size	10Inches
Packing	Box
Shipping	Sea/Air
Place of origin	Guangzhou,China

Scooter Brake Disc: The brake disc is an essential component of a scooter's braking system. It is a circular metal disc attached to the wheel hub. When the brake is applied, brake pads squeeze against the disc, creating friction and causing the scooter to slow down or stop.

Electric Motor: In the context of a scooter, an electric motor refers to the motor that drives the scooter's wheels. It is powered by a battery and provides the necessary propulsion for the scooter to move. Electric motors in scooters are designed to be efficient and deliver the required power for the scooter's performance.

Model: The model you mentioned, 48V-60V 10Inches, likely refers to the voltage range and wheel size of the scooter. It indicates that the scooter's electrical system operates on a voltage range of 48 to 60 volts. The "10 inches" refers to the size of the scooter's wheels, which can affect the overall performance, stability, and ride quality.

Please note that specific scooter models and configurations can vary, and it's always recommended to refer to the manufacturer's documentation or contact the scooter manufacturer directly for accurate and up-to-date information regarding the specific model you are interested in.
