

Iron Motorcycle Rocker Arm For BAJAJ PULSAR 135 JD 5112 07

Our Product Introduction

Basic Information

- Place of Origin: Guangdong, China
- Brand Name: WAY-C
- Model Number: PULSAR 135
- Minimum Order Quantity: 200 pieces
- Price: \$2.00/pieces 100-990 pieces
- Packaging Details: NYLON+CARTON
- Delivery Time: 30-45days
- Payment Terms: L/C, D/A, D/P, T/T, Western Union, MoneyGram
- Supply Ability: 20000 Piece/Pieces per Month

Product Specification

- Model: PULSAR 135
- Product Name: Rocker Arm
- MOQ: 200PCS
- Material: Iron
- Quality: High Qaulity
- Shipping: Sea Transport.Air Transport Air Express
- Port: NANSHA/HUANGPU, GUANGZHOU
- Parts NO: JD 5112 07
- Highlight: Iron Motorcycle Rocker Arm,
Motorcycle Rocker Arm JD 5112 07

Product Description

JD 5112 07 Motorcycle Rocker Arm for BAJAJ PULSAR 135

Products Description

Product name	Rocker Arm
Model	PULSAR 135
Materials	Iron
Parts NO	JD 5112 07
Packing	Box
Shipping	Sea/Air
Place of origin	Guangzhou,China

The Bajaj Pulsar 135 motorcycle is equipped with rocker arms as part of its valve train mechanism. Rocker arms play a critical role in opening and closing the engine's valves. However, I don't have access to specific information about the rocker arm model for the Bajaj Pulsar 135. Here is some general information about motorcycle rocker arms:

Function: Rocker arms are responsible for transmitting the motion from the camshaft to the valves. They convert the rotational motion of the camshaft into linear motion to open and close the valves at the appropriate timing.

Design: Rocker arms are typically metal components with a pivoting point in the middle. One end of the rocker arm is in contact with the camshaft, while the other end is in contact with the valve stem. As the camshaft rotates, it pushes the rocker arm, which, in turn, pushes the valve down to open it. When the camshaft lobe moves away, the rocker arm returns to its original position, allowing the valve to close.

Material and Manufacturing: Rocker arms are commonly made of steel or aluminum alloys to withstand the stresses and high temperatures within the engine. The manufacturing process involves precision machining to ensure proper fit and function.

Maintenance: Proper maintenance of rocker arms is essential for optimal engine performance. This includes regular inspection for wear or damage, ensuring proper lubrication, and adjusting valve clearances if necessary.

For specific details about the rocker arm model used in the Bajaj Pulsar 135 motorcycle, I recommend referring to the official Bajaj documentation, contacting authorized Bajaj dealers or service centers, or reaching out to Bajaj customer support for accurate and up-to-date information.
