| Materials | Iron |
| Parts NO | 1102510 |
| Packing | Nylon |
| Shipping | Sea/Air |
| Place of origin | Guangzhou,China |

The TVS STAR HLX150 motorcycle typically comes with a front fender, also known as a mudguard, which is an important component that helps protect the rider and the motorcycle from dirt, debris, and water splashes. However, I don't have access to specific information about the front fender model for the TVS STAR HLX150. Here is some general information about motorcycle front fenders:

Function: The front fender is positioned above the front wheel and serves several purposes. It helps to prevent road debris, water, and mud from being thrown up by the rotating front wheel, keeping the rider and motorcycle cleaner. It also helps to protect the front suspension components and other parts from damage caused by flying debris.

Design: Motorcycle front fenders are typically made of durable materials such as plastic or metal. They are designed to be lightweight yet sturdy enough to withstand the forces encountered during riding. Front fenders may have a curved or contoured shape to follow the contours of the wheel and provide adequate coverage.

Mounting: Front fenders are usually mounted to the motorcycle's fork or front suspension system. They may be secured using bolts, brackets, or clips, depending on the specific design of the motorcycle.

Aesthetics: In addition to their functional purpose, front fenders also contribute to the overall aesthetic appearance of the motorcycle. They can be styled and painted to match the design and color scheme of the motorcycle.

For specific details about the front fender model used in the TVS STAR HLX150 motorcycle, I recommend referring to the official TVS documentation, contacting authorized TVS dealers or service centers, or reaching out to TVS customer support for accurate and up-to-date information.
