Product Description

E43502705 Moto TAXI TUKTUK Accessoire Tricycle Starter Motor For Piaggio Ape

Products Description

Product name	Starter Motor
Model	Piaggio Ape
Materials	Copper
Parts NO	E43502705
Packing	Box
Shipping	Sea/Air
Place of origin	Guangzhou,China

The starter motor of a motorcycle usually refers to an electric starter, also known as a starter motor. To start a motorcycle's engine, you typically press the starter button or twist the starter switch, which delivers electrical current to the starter motor.

The starter motor is composed of a DC motor, which generates rotational force through electricity. When you press the starter button, electricity flows through the circuit to the starter motor. The electric motor in the starter motor converts electrical energy into mechanical energy, and transmits the rotational force to the crankshaft of the engine through mechanisms such as drive gears and chains.

The rotational force of the starter motor causes the engine's crankshaft to begin to rotate, thereby initiating the engine's reciprocating motion. Once the engine is up and running, it continues to drive itself and the function of the starter motor is no longer needed.
