Product name	Tail Light
Model	BAJAJ RE
Materials	Plastic
Parts NO	BB201104/BB201105
Packing	Box
Shipping	Sea/Air
Place of origin	Guangzhou,China

A motorcycle taillight is a lighting device installed on the rear of a motorcycle to provide rear visual warning signals. It helps other traffic participants identify the location and driving direction of motorcycles at night or in bad weather conditions, thereby increasing driving safety.

Motorcycle taillights usually consist of a set of red LED lights or traditional light bulbs. LED lights are widely used in modern motorcycle taillights due to their low power consumption, high brightness and long life. Tail lights are often equipped with reflectors or lenses to increase the visibility and directionality of the light.

In addition to the basic taillight function, some motorcycle taillights also have other functions, such as brake lights and turn signals. The brake lights illuminate when the rider applies the brakes, signaling to vehicles behind that the motorcycle is slowing down or stopping. The turn signal flashes when the rider turns on the steering switch to indicate the motorcycle's turning intention.

In order to further improve the visibility and safety of motorcycles, some motorcycle taillights also use high-brightness, flashing or breathing light effects. These special lighting effects attract more attention and better alert other vehicles and pedestrians.
