Products Description

Product name	Air Filter
Model	BAJAJ RE TVS KING
Materials	Filter paper
Parts NO	AL 1210 62
Packing	Box
Shipping	Sea/Air
Place of origin	Guangzhou,China

The motorcycle air filter is an important component installed in the intake system of a motorcycle engine. It is used to filter the air entering the engine to prevent dust, impurities and other pollutants from entering the combustion chamber. The main function of the air filter is to keep the air entering the engine clean. It filters airborne particles such as dust, dirt, insects, etc., preventing them from entering the engine and causing wear or damage. At the same time, the air filter can also prevent moisture and other liquids from entering the engine, ensuring dry air in the combustion chamber.

Motorcycle air filters are usually made of fibrous materials, such as paper filters or cotton fiber filters. These materials have a good filtering effect and can effectively capture tiny particles in the air. Some high-performance motorcycles may use high-flow and high-efficiency air filters to provide greater air flux and better filtration.

Keeping your motorcycle air filter clean and in good condition is critical to proper engine operation. Regularly inspecting and replacing your air filter is an important step in maintaining engine performance and fuel economy. For specific replacement cycles and maintenance methods, please refer to the motorcycle manufacturer's recommendations or user manual.
