Product Description

G4040980 BAJAJ TVS KING Tricycle Moto Taxi TUKTUKClean Air Filter Element

Products Description

Product name	Air Filter Element
Model	BAJAJ TVS KING
Parts NO	G4040980
Packing	Box
Shipping	Sea/Air
Place of origin	Guangzhou,China

The motorcycle air filter is an important component installed in the air intake system of a motorcycle. It is used to filter the air entering the engine, prevent dust, sand, insects and other impurities from entering the engine, and keep the engine clean and running normally.

The air filter element is usually located inside the motorcycle's air filter box, located near the air intake. It consists of filter media and filter element housing.

Filter media: The filter media of air filters is usually made of fiber materials, such as paper filters, fabric filters, or sponge filters. These materials have fine pores and fiber structures that effectively block the passage of particulate matter and allow air to circulate.

Filter Housing: The filter housing is the outer housing that protects the filter element and installs it in the air cleaner box. Has sufficient strength and sealing to prevent air from bypassing the filter element and entering the engine.

The function of the air filter is to prevent dust and impurities from entering the engine and keep the engine clean. An effective air filter can extend engine life, improve fuel economy, and reduce damage and wear to your engine. Therefore, regular inspection and replacement of air filters is an important part of motorcycle maintenance.

The frequency of air filter replacement depends on riding conditions. In dusty environments or with frequent off-road riding, more frequent replacement may be necessary. Generally speaking, it is recommended to check the condition of the air filter every few thousand kilometers or every maintenance cycle and clean or replace it as necessary.
