Product Description

53111H2C000HA94 HAOJUE KA125/KA150 Motorcycle Front Fender Mudguard

Products Description

Product name	Front fender
Model	KA125/KA150
Materials	Plastic
Parts NO	53111H2C000HA94
Packing	Box
Shipping	Sea/Air
Place of origin	Guangzhou,China

The front fender tile of a motorcycle refers to a protective device located above the front wheel of a motorcycle. It is usually used to reduce the splash and damage to the vehicle and rider caused by mud, water spray or gravel thrown by the front wheel.

The front fender tile is made of plastic material, which is flexible and durable. They are mounted on the front fork section of the motorcycle and extend over the front wheel to block splash from the front wheel.

The main functions of front fender tiles include:

Prevent splashing: During driving, the front wheels will throw mud, water spray or gravel from the road into the surrounding environment. The installation of front fender tiles can reduce the splash of these objects on rear vehicles, pedestrians, and your own vehicle and riders.

Protect the vehicle body: fender tiles prevent projectiles from directly impacting the vehicle body surface, reducing the possibility of scratches and damage.

Improved vision: The front fender tiles can also reduce the splash of sediment and water, improve the rider's vision and improve driving safety.

Maintenance and cleaning: fender tiles can prevent some debris from entering the engine area or other parts, helping to keep certain areas clean.

It's important to note that front fender tiles don't completely stop all splatter, especially under extreme conditions (such as heavy rain or poor road conditions). Therefore, riders should also pay attention to maintaining a safe distance and moderate speed when riding a motorcycle to reduce the impact of splashes on themselves and others.
