WAY-C

The motorcycle handlebar switch is a control switch device installed on the motorcycle handlebar and is used to control various functions and systems. It contains a series of on-off buttons and toggle switches for controlling lights, signals, horns, starting circuits, etc.

Function: Motorcycle handlebar switches usually include the following functions and controls:

Light control: The switch button is used to control the on and off of the headlights, rear taillights and turn signals.

Speaker: The switch button is used to control the operation of the speaker. Starting circuit: The switch button is used to start the motor and start the motorcycle.

Power switch: The toggle switch is used to control the power on and off.

Other functions: Depending on the motorcycle model and configuration, the handlebar switch may also include other functions, such as wipers, electronic ignition, battery switching, etc. Installation location: The motorcycle handlebar switch is usually installed on the motorcycle handlebar, close to the rider's hand position to facilitate control and use.
