## Product Description

### PF402200 Motorcycle Accessoires Cable Complet Wire Wiring Harness for BAJAJ BOXER BM150

#### Products Description

Product name	Wiring Harness
Model	BAJAJ BOXER BM150
Materials	Copper
Parts NO	PF402200
Packing	Box
Shipping	Sea/Air
Place of origin	Guangzhou,China

Motorcycle Wiring Harness is a system of wires and connectors used to connect and power various electrical components and systems of a motorcycle. It is responsible for delivering power and signals so that various parts of the motorcycle function properly.

**Structure and composition:** The entire motorcycle cable is composed of multiple wires and connectors, which connect the motorcycle's battery, generator, ignition system, lights, instrument panel, switches, sensors, charging system and other parts. Electrical wires are usually made of insulated copper wire to prevent current leakage or short circuits.

**Color Coding:** Wires throughout a motorcycle's wiring are often color coded to make it easier to identify and connect the correct wires. For example, red wires are typically used for positive power or current input, black wires are typically used for negative or ground, and other colored wires are used for specific functions and systems.

**Installation and maintenance:** The entire motorcycle wiring is an important part of the motorcycle electrical system. Installation and maintenance should be performed by professional motorcycle maintenance technicians. Proper installation and maintenance ensure reliable wiring connections and reduce the risk of circuit failure.

**Troubleshooting:** If your motorcycle is experiencing an electrical system failure, such as lights not coming on, starting problems, or electrical equipment failure, you may need to check and repair all wiring connections throughout the vehicle. This may involve finding breaks, shorts, damaged connectors or wires and repairing or replacing them appropriately.
