Motorcycle handlebars are parts of a motorcycle used to steer and control operations, usually located at the front of the vehicle. The handlebar is one of the main points of contact between the rider and the motorcycle. By operating the controller on the handlebar with his hands, the rider can control steering, acceleration, braking and other operations.

UNICORN 160 The handlebar shape and height can affect the rider's riding posture and hand position, thereby affecting the motorcycle's control and riding comfort.

Controllers and switches: There are usually various controls and switches installed on the handlebars to control different functions. Common controllers and switches include the steering handle (Throttle) for controlling the throttle, the brake lever (Brake Lever) for controlling the front and rear brakes, the clutch lever (Clutch Lever) for controlling the clutch, and the turn signal switch (Turn Signal Switch) for Control turn signals, etc.

Adjustment UNICORN handlebars can be adjusted or replaced to suit the rider's needs and preferences. The angle, height and position of the handlebars can be adjusted to change the rider's riding posture and control feel.
