Product Description

JL 5812 01 Motorcycle Carburetor for BAJAJ PULSAR NS 200

Products Description

Product name	Carburetor
Model	BAJAJ PULSAR NS 200
Materials	Alloy
Parts NO	JL 5812 01
Packing	Box
Shipping	Sea/Air
Place of origin	Guangzhou,China

BAJAJ PULSAR NS200 motorcycle uses a carburetor fuel supply system.

Models and Specifications: BAJAJ PULSAR NS200 uses a single-piece carburetor with appropriate fuel injection nozzles and mixture adjustment.

Fuel supply principle: The carburetor mixes air and fuel to form a combustible mixed gas for the engine to burn. Air enters the carburetor through the air filter, and fuel is ejected through the fuel injection nozzle to form a mixed gas. The carburetor also adjusts the concentration of the mixture according to the engine load and speed through the mixture adjustment device.

Adjustment and Maintenance: Proper operation of the carburetor requires regular adjustment and maintenance. This includes cleaning the carburetor and fuel injection nozzles to remove built-up dirt and deposits and ensure clear fuel injectors. In addition, proper mixture adjustment is required based on engine operating conditions and environmental conditions.

Problems and Troubleshooting: Carburetors can experience some common problems, such as clogging, oil leakage, or inaccurate mixture concentration. If you're experiencing problems with reduced performance, poor fuel economy, or erratic engine operation, you may need to inspect and clean your carburetor and make sure it's properly adjusted.
