Product Description

21C F2210 00 Motorcycle Rear Shock Absorber Assy for YAMAHA FZ16

Products Description

Product name	Motorcycle Rear Shock Absorber
Model	YAMAHA FZ16
Materials	Alloy
Parts NO	21C F2210 00
Packing	Box
Shipping	Sea/Air
Place of origin	Guangzhou,China

Motorcycle rear shock absorber, also known as a rear suspension shock or simply a shock, is a vital component of a motorcycle's suspension system. It is responsible for absorbing and dampening the impact and vibrations that occur when riding over uneven surfaces or encountering bumps and potholes on the road.

The rear shock absorber plays a crucial role in maintaining the stability, control, and comfort of the motorcycle. It helps to keep the rear wheel in contact with the road surface, ensuring optimal traction and handling.

Rear shock absorbers are typically comprised of a cylindrical body filled with hydraulic fluid or gas, a piston, and a spring. The piston moves within the shock body, compressing the fluid or gas and generating resistance to absorb the energy from impacts.

FZ16 Motorcycles come equipped with adjustable rear shock absorbers. These allow riders to fine-tune the suspension settings according to their preferences. Adjustable features may include preload (to adjust the amount of initial compression), damping (to control the speed of compression and rebound), and sometimes even ride height.
