Universal Motorcycle Moto LED Indicator Pointer Turn Signal Lamp Assy

Our Product Introduction

Basic Information

- Place of Origin: Guangdong, China
- Brand Name: WAY-C
- Model Number: Universal
- Minimum Order Quantity: 100 pieces
- Price: 5.00/pieces 100-990 pieces
- Packaging Details: Box+CARTON
- Delivery Time: 30-45days
- Payment Terms: L/C, D/A, D/P, T/T, Western Union, MoneyGram
- Supply Ability: 10000 Piece/Pieces per Month

Product Specification

- Model: Universal
- Product Name: Turn Signal Lamp Assy
- MOQ: 100PCS
- Material: Plastic
- Quality: High Quality
- Shipping: Sea Transport.Air Transport Air Express
- Port: NANSHA/HUANGPU, GUANGZHOU
- Parts NO: OEM
- Highlight: **Universal Moto LED Indicator,
Universal Motorcycle LED Indicator,
Moto Turn Signal Lamp**

Product Description

Universal Motorcycle Moto LED Indicator Pointer Turn Signal Lamp Assy

Products Description

Product name	Turn Signal Lamp Assy
Model	Universal
Materials	Plastic
Parts NO	OEM
Packing	Box
Shipping	Sea/Air
Place of origin	Guangzhou,China

The motorcycle turn signal lamp assembly, also known as the turn signal indicator or blinker, is a component that provides visual signals to indicate the intention of the motorcycle rider to change direction or make a turn while riding on the road. The turn signal lamp assemblies are typically located at the front and rear of the motorcycle and are an essential safety feature.

Here are some key points about motorcycle turn signal lamp assemblies:

Function: The primary function of the turn signal lamp assembly is to emit a flashing light when activated by the rider. This light indicates to other road users that the motorcycle intends to change lanes or make a turn, thus helping to communicate the rider's intentions and enhance safety.

Construction: The turn signal lamp assembly consists of several components, including a plastic or glass lens, a bulb or LED light source, a reflector, and electrical wiring. The lens is usually amber or orange to comply with regulations and provide high visibility to other road users.

Operation: When the rider activates the turn signal switch, an electrical current flows to the turn signal lamp assembly, causing the bulb or LED to flash on and off. This intermittent flashing pattern grabs the attention of other road users, indicating the rider's intended direction.
