The motorcycle battery is an essential component that provides electrical power to start the motorcycle's engine and operate various electrical systems and accessories. Here are some key points about motorcycle batteries:

Type: Motorcycle batteries are typically lead-acid batteries, specifically either conventional lead-acid (flooded) batteries or maintenance-free (sealed) batteries. Conventional lead-acid batteries require periodic maintenance, such as checking and topping up electrolyte levels, while maintenance-free batteries are designed to be sealed and require no maintenance.

Voltage: Most motorcycles use a 12-volt electrical system, so the battery provides 12 volts of direct current (DC) power to the motorcycle's electrical components.
