Product name	Motorcycle Side Stand
Model	TVS NEO110
Materials	Iron
Parts NO	R1120090
Packing	Box
Shipping	Sea/Air
Place of origin	Guangzhou,China

**WAY-C**

Motorcycle main stand, also known as a center stand or main stand, is a mechanical device attached to a motorcycle that allows it to be securely parked in an upright position when not in use. Here are some key points about motorcycle main stands:

**Function:** The main stand provides stability and support to the motorcycle when it is parked. It allows the motorcycle to be lifted and balanced on both wheels, keeping it upright and reducing the risk of tipping over.

**Design and Construction:** Motorcycle main stands are typically made of sturdy metal, such as steel or aluminum, to withstand the weight of the motorcycle. They are designed to be strong and durable, capable of supporting the motorcycle's weight without bending or flexing.

**Location:** Main stands are usually located at the center or rear portion of the motorcycle, beneath the engine or the frame. They are often operated by using a lever or foot pedal mechanism.

**Deployment:** To deploy the main stand, the rider typically needs to apply downward force or leverage to lift the rear of the motorcycle while keeping their feet on the ground. This action raises the motorcycle onto the main stand, allowing it to rest in an upright position.
