WAY-C®**CARBURETOR BM150 UG**

To better understand, let's discuss what a motorcycle carburetor BAJAJ BOXER BM150 UG actually is. In the simplest terms, the job of a motorcycle "carburetor" or a series of multiple carburetors is to create a combustible mixture of gasoline and air that powers the engine and creates the driving force that propels the vehicle forward. Carburetors have been updated, modernized, and improved over the years; however, the basic premise of mixing fuel and air has not changed.

How does a carburetor BAJAJ BOXER BM150 UG work? So, what does a carburetor do? How does a motorcycle carburetor work?

The job of a carburetor is to provide an air/fuel mixture to an internal combustion engine. The carburetor BAJAJ BOXER BM150 UG regulates the flow of air through the main bore (the flow of air sucks in fuel, and the mixture enters the engine through the intake valves). The carburetor consists of a bowl, center bore, passages, jets, vents, slides, enricher (aka choke), idle speed adjustment, air/fuel ratio adjustment, and usually an accelerator pump.
