## Product Description

### 3D9-F1611-10 Motorcycle Rear Fender Mud Guard YAMAHA YBR125

#### Products Description

The 3D9-F1611-10 rear fender mud guard is a must - have accessory for YAMAHA YBR125 motorcycles, offering both functionality and style.

#### Product Description

This rear fender mud guard is specifically designed to fit the YAMAHA YBR125 perfectly. Its main role is to prevent mud, water, and debris from splashing onto the motorcycle's rear components, the rider, and the passenger. By acting as a protective shield, it helps keep the motorcycle clean and reduces the risk of damage to sensitive parts like the engine, exhaust, and electrical components caused by dirt and moisture.

#### Notable Features

- **Durable Material:** Constructed from high - quality ABS plastic, this mud guard is highly resistant to impacts, scratches, and corrosion. ABS plastic offers a great balance between strength and lightweight, ensuring it can withstand the rigors of daily riding and various weather conditions without adding excessive weight to the motorcycle.
- **Aerodynamic Design:** The fender's shape is not only functional but also aerodynamically optimized. It smoothly guides the air around the rear of the motorcycle, reducing drag and enhancing the bike's overall performance. This design also gives the YBR125 a more streamlined and modern look.
- **Easy Installation:** It comes with pre - drilled holes and all the necessary mounting hardware, allowing for a hassle - free installation. Even riders with basic mechanical skills can quickly attach it to their YAMAHA YBR125, saving time and effort.

#### Production Process

- **Mold Making:** The production begins with the creation of a precise mold. Skilled technicians use advanced CAD/CAM technology to design a mold that accurately replicates the desired shape of the rear fender. This mold serves as the blueprint for the entire production process.
- **Injection Molding:** Molten ABS plastic is injected into the mold under high pressure. This process ensures that every detail of the fender, from its curves to the mounting points, is accurately reproduced.
- **Finishing and Quality Control:** After the plastic cools and solidifies, the fender undergoes a series of finishing processes, including trimming, sanding, and polishing. Each mud guard is then rigorously inspected for any defects, ensuring that only high - quality products reach the market.

#### Price Advantage

Priced competitively in the market, the 3D9-F1611-10 rear fender mud guard offers great value for money. Compared to other branded mud guards, it provides similar or even better quality at a more affordable price. This makes it an ideal choice for budget - conscious YAMAHA YBR125 owners who don't want to compromise on quality.

#### Use Scenarios

- **Daily Commuting:** In urban areas with frequent rain and uneven roads, the mud guard effectively keeps the motorcycle clean during stop - and - go traffic. It protects the bike from the splashes of puddles and the dirt kicked up by the tires, ensuring a more pleasant and hassle - free commute.
- **Weekend Rides:** Whether it's a countryside adventure or a trip to the beach, the fender can handle the various terrains. It safeguards the motorcycle from the mud on dirt roads or the salty sea spray near the coast, allowing riders to enjoy their weekend getaways without worrying about damage to their bikes.

Product name	Rear Fender

## Rear Fender YBR125

NO C216 Baiyun Motorcycle Parts Market  
Baiyun District Guangzhou China

The rear fender of a motorcycle is a component located at the rear of the bike, above or behind the rear wheel.

**Protection:** The rear fender helps protect the rider and the motorcycle from road debris, water, mud, and other elements. It prevents these substances from being thrown up by the rotating rear wheel and hitting the rider or other parts of the bike.

**Style:** Rear fenders can contribute to the overall aesthetics and style of a motorcycle. They come in various designs and shapes, allowing riders to customize the appearance of their bikes. Some motorcycles have minimalistic rear fenders, while others have more elaborate and decorative designs.

**Functionality:** The rear fender may also have functional elements. For example, it may incorporate the taillight, turn signals, license plate holder, and other electrical components. In some cases, the rear fender may also include a built-in seat cowl or a passenger seat.
